1 Why this session?

The objective of education is learning, not teaching.

For ICT professionals who already prompt:

When *you* learn something new — how do you use AI so it actually helps you grow?

Show of hands: who used a chatbot this week to *learn* something? Short input, then discussion.

2 AI and education — same tension

- Polished output; invisible process
- We judge tools we do not yet use well (calculators, Wikipedia, Stack Overflow...)
- Headlines: *whether* to use AI — practice needs *how* and *when*

Shift: quantity policing → quality of collaboration

3 The e-bike for thinking

Barend Last (TEDx): **AI is an e-bike for our thinking.**

Mode	AI use
Bearable	Same task, less tedious effort
Exploratory	Ideas and depth you could not reach alone

Both valid — if **conscious**.

4 Desired difficulties

- Offloading: GPS, calculators — AI supercharges it
- **Desired difficulties:** sometimes learn *without* AI on purpose
- Effort shifts to **evaluating and refining** — not disappearing

5 Two students, same deliverable

Student A: “*I used ChatGPT.*” Full stop.

Student B: Messy notes → AI critiques → missed stakeholder → verified brief → **different conclusion** than AI’s draft

Both used AI heavily. Only one learned.

Lvl	Name	Looks like
-----	------	------------

6 Four levels of engagement

Lvl	Name	Looks like
1	Accepting	Face-value output
2	Refining	Polish; same core ideas
3	Challenging	Verify; document disagreements
4	Integrating	Own thinking + new insights

Processes, not identities — notice which level you are in.

7 Quality over quantity

Old question	Better question
How much AI?	How well did you collaborate?

LO6: learn, plan, critique, reflect — show growth over time.

8 Three habits

1. **Start messy, then AI**
2. **Ask for critique, not answers**
3. **Leave a trail** (AI Archives, MMM where needed)

Conductors, not soloists.

9 Discussion

- When is **Accepting** enough for you?
- Last week: which level — honestly?
- **Desired difficulties** for juniors?
- **Integrating** in a code review?

Pairs (2 min): one AI session this week — which level?

10 Takeaway

AI doesn't make us dumber. Dumb choices do.
